UNIFORM CRIME REPORTS

J. Edgar Hoover, Director, Federal Bureau of Investigation, U. S. Department of Justice, Washington, D. C.

Volume XVII

July 1946

Number 1

SUMMARY

Urban Crime Trends

The widespread increase in crime noted last year continued into 1946 with a 13.0 percent rise recorded during the first 6-month period according to the reports of 1,997 cities representing over 88 percent of the Nation's urban population. Although each category of crime rose, murder and robbery stood out with jumps of 28.5 percent and 31.8 percent respectively. Negligent manslaughters were up 19.2 percent and other increases were: Burglary, 17.0 percent; auto theft, 15.5 percent; aggravated assault, 10.0 percent; larceny, 9.8 percent; and rape, 1.6 percent.

Crime Rates, 1946

Generally the highest crime rates are in the large cities particularly for the more serious offenses, although the smaller cities showed the sharpest increases this year in more categories than the larger communities. The highest rates for crimes against the person are in the South Atlantic and East South Central States while the Pacific States show the largest figures for offenses against property.

Value of Property Stolen

The general increase in the number of crimes committed during January-June of 1946 was accompanied by an increase of 4.7 percent in the value of the loot taken in the average offense against property. Thus, the total value of property stolen in robberies rose 22.1 percent; in burglaries, 27.0 percent; in larcenies, 20.4 percent; and in auto thefts, 12.6 percent.

Ninety-six percent of the stolen automobiles and 18 percent of other stolen property were recovered.

Rural Crime Trends

A 19.6 percent increase in crime was registered in the rural areas during the first half of 1946 compared with a similar period of the preceding year. The 20.9 percent rise in murders was not so great as the upswing in the urban areas but in all other classes the rural upward trend was sharper. Most pronounced were the increases in robbery (48.4 percent) and auto theft (34.3 percent), while other rural crimes rose as follows: Aggravated assault, 23.8 percent; negligent

manslaughter, 22.9 percent; burglary, 17.9 percent; larceny, 13.0 percent; and rape, 8.3 percent.

Persons Arrested, January-June 1946

Of the 309,302 fingerprint arrest records received for filing during the first half of this year, 41 percent were arrests for major violations and over 10 percent of the total arrests represented females. Despite a general leveling off of the upward trend in youths arrested, those under 25 years of age represented 55.6 percent of those charged with robbery; 62.2 percent of the burglary arrests; and 76.8 percent of the arrests for auto theft.

Of the total arrests 53.4 percent were repeaters and 56.1 percent were arrested outside of their State of birth.

Offenses Cleared by Arrest, 1945

During 1945 the police arrested the slayer in 85.1 percent of their criminal homicide cases and the assailant in 75.9 percent of the crimes of rape and other felonious assault. Of the crimes against property, 25.9 percent were cleared by arrest. For individual offense classes the percentage cleared was as follows: Murder, 86.9; negligent manslaughter, 82.7; rape, 74.1; aggravated assault, 76.2; robbery, 36.2; burglary, 31.3; larceny, 22.8; and auto theft, 26.4.

Persons Found Guilty, 1945

Over 80 percent of the persons charged by the police were found guilty in court. The figures ranged from 40.0 percent for negligent manslaughter to 89.0 percent for driving while intoxicated.

Police Department Employees, April 30, 1946

There were 1.67 police department employees for each 1,000 inhabitants as of April 30, 1946, according to the reports of 3,178 cities representing 98 percent of the Nation's urban population. The number of employees per 1,000 inhabitants ranged from 0.90 in cities under 10,000 in population in the West North Central States to 2.84 in New England cities with over 250,000 inhabitants.

Police Employees Killed, 1945

Fifty-nine police employees were killed in the performance of their law enforcement duties during 1945 in the foregoing 3,178 urban communities. While the rate was 4.06 police employees killed per 5,000,000 inhabitants for the country as a whole, the number killed per unit of population was generally higher in the small communities than in the large metropolitan cities.

CLASSIFICATION OF OFFENSES

The term "offenses known to the police" is designed to include those crimes designated as part I classes of the uniform classification occur-

ring within the police jurisdiction, whether they become known to the police through reports of police officers, of citizens, of prosecuting or court officials, or otherwise. They are confined to the following group of seven classes of grave offenses, shown by experience to be those most generally and completely reported to the police: Criminal homicide, including (a) murder, nonnegligent manslaughter, and (b) manslaughter by negligence; rape; robbery; aggravated assault; burglary—breaking or entering; larceny—*theft*; and auto theft. The figures contained herein include also the number of attempted crimes of the designated classes. In other words, an attempted burglary or robbery, for example, is reported in the bulletin in the same manner as if the crime had been completed. Attempted murders, however, are reported as aggravated assaults.

“Offenses known to the police” include, therefore, all of the above offenses, including attempts, which are reported by the law-enforcement agencies of contributing communities and not merely arrests or cleared cases. Offenses committed by juveniles are included in the same manner as those known to have been committed by adults, regardless of the prosecutive action. Complaints which upon investigation are learned to be groundless are not included in the tabulations which follow.

In publishing the data sent in by chiefs of police in different cities, the F B I does not vouch for their accuracy. They are given out as current information which may throw some light on problems of crime and criminal-law enforcement.

In compiling the tables, returns which were apparently incomplete or otherwise defective were excluded.

In the last section of this bulletin may be found brief definitions of part I and II offense classifications.

MONTHLY REPORTS

Offenses Known to the Police—Cities Divided According to Population

Table 1 shows the number of offenses and the rate per 100,000 inhabitants recorded during the first 6 months of 1946 by 2,297 cities representing a combined population of 67,751,293 (91 percent of the urban population of the Nation). The data are presented for the cities grouped according to size.

The primary purpose of such a table is to make it possible for police administrators and other interested individuals to compare similar data compiled locally with the National average for cities of approximately the same size; however, in view of the heavy crime increases reported during the first 6 months of 1946 (table 2) it is interesting to compare the rates for the various population groups as presented in table 1 with a similar tabulation for the first 6 months of 1945 presented in Volume XVI, Number 1 of this publication. Although the tabulations are not based on identical cities the communities for the most part are the same and the number of offenses per 100,000 inhabitants are considered generally comparable.

Such a comparison reflects substantial increases in crime in each of the six population groups with most of the heaviest increases indicated for cities with population under 10,000. In fact, an examination of the rates for each offense class within each population group reflects only four decreases as follows: A slight decrease was recorded in the murder classification for cities with population from 50,000 to 100,000; offenses of rape showed decreases in cities with population from 100,000 to 250,000 and in the group with population from 25,000 to 50,000; and assaults declined in cities with population from 100,000 to 250,000.

In all other instances increases were reflected indicating that the upswing in crime during the first half of 1946 was not confined to any one population group but appeared to a marked degree in cities of all sizes.

The number of offenses per 100,000 inhabitants for the first half of this year for individual States may be found in table 4 and for population groups within the nine geographic divisions in table 5.

Total Population 66,045,773

1945 LEVEL

1945 LEVEL

FIGURE 1.

Trends in Offenses Known to the Police, January-June 1945-46

Crime rose 13.0 percent during the first half of 1946 compared with January-June of the previous year according to the crime reports received during both periods from the police in 1,997 cities covering over 88 percent of the Nation's urban population.

Every offense class was up and the increase was pronounced in each category, except for rape which rose but 1.6 percent.

Outstanding in the upward trends are the crimes of murder and robbery which jumped 28.5 percent and 31.8 percent, respectively. Negligent manslaughters were up 19.2 percent and the other increases were: Burglary, 17.0 percent; auto theft, 15.5 percent; aggravated assault, 10.0 percent; and larceny, 9.8 percent.

These trends are particularly alarming when it is remembered that a definite rise in crime was recorded in the two preceding issues of the Uniform Crime Reports Bulletin (Volume XVI, Numbers 1 and 2). The first half of 1945 showed increases which seemed to gather momentum through the fall and winter months until by the end of 1945 a greater and more widespread increase was reflected in the figures than was on record for any year since the inception of the Uniform Crime Reporting program in 1930.

The urban crime trend data are presented in table 2 and information as to rural trends may be found in table 10.

TABLE 2.—*Trends in offenses known to the police, January-June 1945-46*

[1,997 cities, total population, 66,045,773; based on 1940 decennial census]

Offense	Number of offenses January-June		Change	
	1945	1946	Number	Percent
Total	460,303	520,307	+60,004	+13.0
Murder and nonnegligent manslaughter.....	1,608	2,066	+458	+28.5

Auto theft.....	70,469	81,398	+10,929	+15.5

Offenses Known to the Police—Cities Divided According to Location

Crime rates for individual States for the first half of 1946 are shown in table 4, and for cities divided according to population group within each of the nine geographic divisions, in table 5. It will be observed there is considerable variation in the amount of crime per unit of population among the several States and geographic divisions of the country. This is only to be expected since the volume of crime depends upon such a large variety of factors, some of which are outlined in the text preceding table 6.

In examining the rates in the following tables it should be remembered that for the purpose of uniformity the 1940 decennial census figures were used in compiling the data and since that time marked changes have occurred in the population of many of the cities used. For example, it is noted the largest number of offenses against property per unit of population are reported in the Pacific area where substantial increases in the urban population are known to have occurred during recent years. Generally the highest rates for crimes against the person are reported in the South Atlantic and East South Central States.

A comparison of the number of offenses per 100,000 inhabitants for the geographic divisions in the following tabulations with similar data for the first half of 1945 reflects substantial increases in crime in each of the nine geographic divisions. Marked increases were noted in the murder and assault rates in the West North Central States. Although the robbery figures increased substantially in all geographic divisions, the rise was comparatively less pronounced in the East North Central, Mountain, and Pacific States, but even in those areas the rates rose approximately 20 percent.

The burglary rates increased most in the West South Central, Middle Atlantic, and West North Central States, and the largest increase in the larceny rates was noted in the Mountain and West North Central States. The auto theft increases were general throughout the country although the rise in the West South Central and Pacific States was not so pronounced.

Offenses of each category within each of the nine geographic divisions showed increases except that murders declined moderately in the New England States as did aggravated assaults in New England and in the South Atlantic area.

In table 3 may be found the number of cities used in preparing the figures for each of the various subdivisions appearing in tables 4 and 5.

TABLE 3.—Number of cities in each State included in the tabulation of uniform crime reports, January-June 1946

Division and State	Total	Population group					
		Over 250,000	100,000 to 250,000	50,000 to 100,000	25,000 to 50,000	10,000 to 25,000	Less than 10,000

¹ The rates for burglary and larceny are based on the reports of 2,295 cities with a total population of 58,364,964.² The rates for burglary and larceny are based on the reports of 533 cities with a total population of 10,250,797.³ The rates for burglary and larceny are based on the reports of 4 cities.⁴ Includes the report of the District of Columbia.

Offenses in Individual Cities With More Than 100,000 Inhabitants

The number of offenses reported as having been committed during the period of January-June 1946 is shown in table 6. The compilation includes the reports received from police departments in cities with more than 100,000 inhabitants. Police administrators and other interested individuals will probably find it desirable to compare the crime rates of their cities with the average rates shown in tables 1 and 5 of this publication. Similarly, they will doubtless desire to make comparisons with the figures for their communities for prior periods, in order to determine whether there has been an increase or a decrease in the amount of crime committed.

Caution should be exercised in comparing crime data for individual cities, because differences in the figures may be due to a variety of factors. The amount of crime committed in a community is not solely chargeable to the police but is rather a charge against the entire community. The following is a list of some of the factors which might affect the amount of crime in a community:

Population of the city and metropolitan area adjacent thereto.

The composition of the population with reference particularly to age, sex, and race.

The economic status and activities of the population.

Climate.

Educational, recreational, and religious facilities.

The number of police employees per unit of population.

The standards governing appointments to the police force.

The policies of the prosecuting officials and the courts.

The attitude of the public toward law-enforcement problems.

The degree of efficiency of the local law-enforcement agency.

It should be remembered that the war brought about marked changes in some of the foregoing factors in many communities.

In comparing crime rates, it is generally more important to determine whether the figures for a given community show increases or decreases in the amount of crime committed than to ascertain whether the figures are above or below those of some other community.

¹ Larcenies not separately reported. Figure listed includes both major and minor larcenies.

² Figures include offenses committed by juveniles; this is in accord with the uniform reporting procedure followed by other cities.

Supplement to Return A Data

A detailed analysis of the Supplement to Return A reports received from 65 cities with over 100,000 inhabitants during the first halves of 1945 and 1946 is presented in the following tabulations. The trends reflected, though generally similar, are not identical to those shown in table 2 since the following data are based on a more limited number of cities.

The analysis reflects little change in the rape figures, 63.5 percent of the total reported during the first 6 months of 1946 being classified as forcible in nature.

The majority (68.6 percent) of the robberies during the first half of 1946 occurred on public streets and 19.3 percent were robberies in commercial houses other than oil stations, chain stores, and banks. These two types of robbery offenses increased 18.2 percent and 93.1 percent respectively over the figures for the first 6 months of 1945.

Residence nighttime burglaries increased 16.3 percent while those

committed during the day went up only 1.7 percent. Among the nonresidence burglaries, however, the heaviest increase (19.2 percent) was seen for the daylight offenses while those committed under cover of darkness increased 14.9 percent.

Considering the value of the property stolen in larceny offenses, the greatest increase was for thefts involving property valued at \$50 and over which went up 17.8 percent during the first half of 1946. With the larcenies grouped according to type of offense the more pronounced increases were for shoplifting, 22.4 percent, and for thefts from automobiles (excluding auto accessories) which rose 21.8 percent. Of the total larcenies reported 30.9 percent were thefts of some type of property from automobiles and 12.5 percent were bicycle thefts.

TABLE 7.—Number of known offenses with divisions as to the nature of the criminal act, time and place of commission, and value of property stolen, January-June 1945-46; 65 cities over 100,000 in population; total population, 22,340,814

As indicated in table 8 the average value of property stolen per offense increased 4.7 percent during the first half of this year in the 65 cities with over 100,000 inhabitants represented. These same cities reported a 12.1 percent rise in the number of crimes against property committed and the result of the combination of upward trends in the number of offenses committed and the average value of property stolen per offense is seen in the figures representing the total value of property stolen which rose 17.1 percent during the first half of this year, from \$29,794,927 in the first half of 1945 to \$34,825,026 during the first half of 1946.

TABLE 8.—*Value of property stolen, by type of crime, January-June 1945-46; 65 cities over 100,000 in population; total population, 22,340,814*

[Population figures from 1940 decennial census. All values have been rounded off to even dollars]

Classification	Number of offenses			Value of property stolen			Average value per offense		
	1945	1946	Percent change	1945	1946	Percent change	1945	1946	Percent change

The 64 cities over 100,000 in population represented in table 9 recovered 62.3 percent of the property stolen during the first half of 1946 as compared with a 66.8 percent recovery during a similar period of 1945.

Exclusive of automobiles, the percentage of property recovered decreased from 21.1 during the first six months of 1945 to 18.3 during January-June of 1946.

The police in the 64 cities represented in table 9 reported the theft of 33,136 automobiles during the first half of 1946 and recoveries total 31,840, or 96.1 percent of the number stolen. This compares with 97.4 percent for the first 6 months of the previous year.

TABLE 9.—*Value of property stolen and value of property recovered by type of property, January-June 1945-46; 64 cities over 100,000 in population; total population, 22,167,749*

Rural Crime Trends, January-June 1945-46

A 19.6 percent crime increase in the rural areas was registered during January-June of 1946 compared with the same period of 1945, and the rural upswing was more pronounced than the increase in the urban places for each offense class except murder, which rose 20.9 percent as compared with a 28.5 percent increase in the cities.

The unusual robbery and auto theft increases in the rural areas of 48.4 percent and 34.3 percent, respectively, exceeded by far the urban crime increases of 31.3 percent for robbery and 15.5 percent for auto theft. Aggravated assaults in the rural areas were up 23.8 percent the first half of this year as compared with a 10.0 percent rise in the cities, and rural negligent manslaughters increased 22.9 percent as compared with a 19.2 percent increase in the urban communities.

The rural burglary increase of 17.9 percent exceeded only slightly the 17.0 percent increase in the urban trends while other thefts unaccompanied by the elements of robbery or burglary increased 13.0 percent in the rural areas as compared with a 9.8 percent rise in the urban communities. Although rape offenses in the urban areas changed only slightly (+1.6 percent), these crimes rose 8.3 percent in the rural areas during the first half of 1946 as compared with the similar period of 1945.

Table 10 presents the available information as to rural crime during January-June of 1945-46, and although the figures are not based on reports received from identical agencies in both periods the combined population represented both years is in excess of 36,000,000. The figures are presented in terms of the number of offenses per 100,000 inhabitants and these data are considered generally comparable.

Some of the rural reports used in compiling the data in table 10 showed very few crimes and may have been based on arrest records rather than on a record of reported offenses. Thus, for offenses against property, where the proportion of reported crimes followed by the arrest of the offender is comparatively low, some incompleteness probably exists and the figures should be considered conservative.

POLICE EMPLOYEE DATA

Police Killed, 1945

There were 59 police employees killed in the performance of their law-enforcement duties during 1945 in the 3,178 cities represented in the following tables. This includes not only those wilfully killed by criminals but also those killed in traffic accidents and the like while on active duty with the department. In each instance where a department reported an employee killed during 1945 the figures were verified by separate correspondence to insure they did not include any killed in the Armed Services and included only those killed while on active duty with the local department.

Information as to the number of police employees killed during 1945 is presented in table 12 and for the geographic divisions and population groups the table shows the number killed per 5,000,000 inhabitants.

The figures reflect a rate of 4.06 employees killed per 5,000,000 inhabitants. With the cities divided into population groups it appears the highest rates were reported by cities with population under 25,000 and for individual geographic divisions the highest rates are shown in the Mountain, West South Central, and Pacific States.

Number of Police Employees, April 30, 1946

A total of 121,113 employees were reported as of April 30, 1946 by the police departments in 3,178 cities representing 98 percent of the urban population of the country. Of the total employees reported, 8,832 were classified as civilians without police power and 112,281 were police officers. Except in isolated instances, substantially all departments operate on a three-shift basis which means that on the average the lives and property of 72,679,100 persons in the reporting cities are protected by approximately 37,400 police officers on duty at any one time, or one police officer for each 1,900 citizens. As a matter of fact the figure is probably closer to 2,000 considering the number of officers assigned to inside administrative duties and days lost due to vacations, sickness, or other causes.

Including civilians the ratio between the number of police employees to population is 1.67 employees per 1,000 inhabitants for the reporting cities as a group. Among the geographic divisions the figures range from 1.24 in the West South Central and Mountain States to 1.93 in the Pacific area. Generally the most police employees per unit of population are found in the larger cities with those over 250,000 in population reporting 2.14 per 1,000 inhabitants and communities under 10,000 showing 1.12.

During the war years the police employee surveys were limited to cities with population in excess of 25,000 and during this period the number of employees steadily declined until this year as indicated in the following figures:

AVERAGE NUMBER OF POLICE DEPARTMENT EMPLOYEES PER 1,000 INHABITANTS

By Population Groups

APRIL 30, 1946

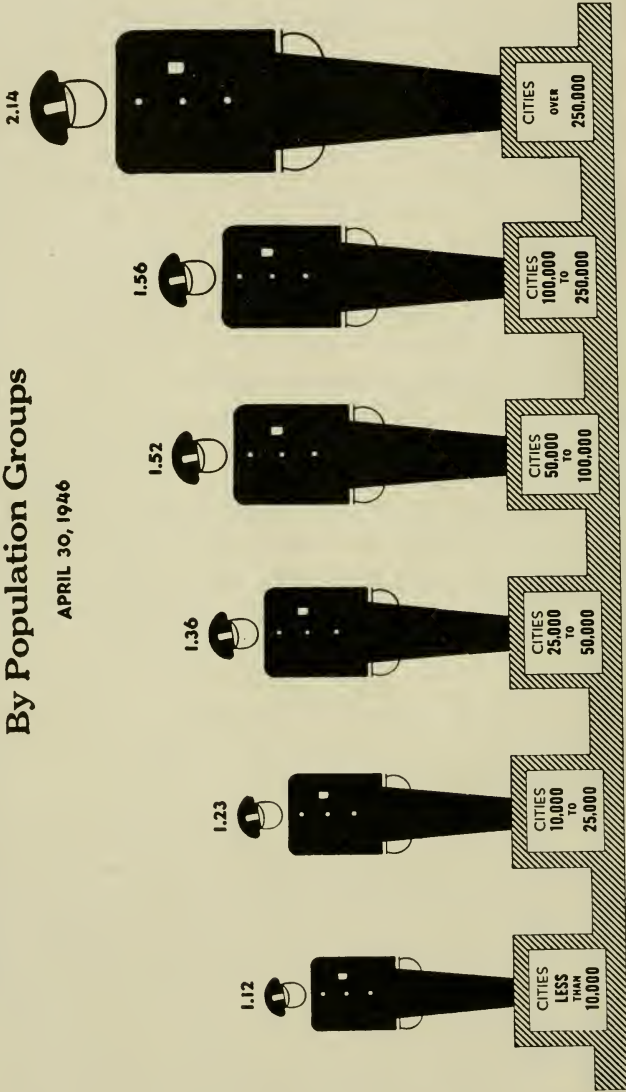

FIGURE 3.

Cities over 25,000 in population

Date:	Number of employees per 1,000 inhabitants

AVERAGE NUMBER OF POLICE DEPARTMENT EMPLOYEES PER 1,000 INHABITANTS

By Geographic Divisions

FIGURE 4.

Police Employees in Individual Cities

The number of police employees reported as of April 30, 1946 in individual cities is presented in tables 14 and 15 with the cities grouped according to size and listed alphabetically within each State. For cities over 25,000 the tabulation indicates the number of police officers, the number of civilian employees, and the total number of employees in each city.

The ratio of civilian employees to police officers is 7.3 percent and as a general rule the larger communities show more of a tendency to utilize the services of civilian employees than do the smaller cities as indicated in the following figures:

Population group:	<i>Percent civilian employees</i>
Total all cities.....	7.3
Group I, cities over 250,000.....	8.7
Group II, cities from 100,000 to 250,000.....	8.7
Group III, cities from 50,000 to 100,000.....	7.8
Group IV, cities from 25,000 to 50,000.....	4.9
Group V, cities from 10,000 to 25,000.....	3.3
Group VI, cities from 2,500 to 10,000.....	3.8

For cities over 25,000 as a group 8.2 percent of the employees were classified as civilian personnel as compared to 8.4 percent in 1945.

The data concerning the number of police employees presented in this issue of the bulletin were collected through the medium of report forms which provided for the listing of full-time police officers, the number of full-time civilian employees, the number of part-time police officers and the number of part-time civilian employees. The form also provided for the local departments to express the number of part-time employees in terms of full-time personnel considering the total time worked by the part-time employees during the month of April in relation to full-time personnel. In some instances the departments limited their entries concerning part-time employees to a statement of the total time worked during April and in such instances this information was converted into terms of full-time employees by the F B I assuming that a full-time employee worked approximately 200 hours during April. In the event the total time worked by the part-time employees was equivalent to at least 75 percent of that worked by a full-time employee, one full-time employee was counted.

School crossing guards paid from police funds were treated as civilian employees unless the department indicated they had police powers. No employees were included if information was available indicating they were not paid from police department funds, and employees on military or other extended leave of absence were excluded from the tabulations.

In examining the figures for individual cities as presented in tables 14 and 15 it should be remembered there are several factors to be considered which are not reflected in the tabulations. For example, some departments still operate on a two-shift basis whereas in most agencies the men are distributed among three shifts. Similarly, differences in the automotive equipment and radio communication facilities would have to be considered as well as the number of private police employed by individuals and organizations as well as public park police, who in some communities constitute a separate unit. For a list of some of the other factors to be considered reference may be made to the data preceding table 6.

It should be particularly noted that in grouping the cities, and, in fact in all the tabulations, the 1940 census figures were used in the interests of uniformity. Since 1940, however, marked changes in population occurred in many communities; a number in the Pacific area, for example, more than doubled in size.

ANNUAL REPORTS, 1945

Offenses Cleared by Arrest, 1945

The police, during 1945, arrested the slayer in 85.1 percent of their criminal homicide cases and the assailant in 75.9 percent of the crimes of rape and other felonious assault. In 25.9 percent of the crimes against property the perpetrator was arrested and made available for prosecution.

The data available in table 16 indicate the relation between the number of offenses committed, the number cleared by arrest, and the number of persons arrested and held for prosecution. As an illustration of the manner in which the figures should be interpreted it may be observed that for every 1,000 auto theft offenses reported 264 were cleared by the arrest of 203 persons. For comprehensive information as to offenses committed in 1945, reference should be made to the annual issue of this publication for that year (Volume XVI, Number 2).

When one or more of the offenders involved in the commission of an offense has been taken into custody and made available for prosecution, the reported offense is treated as cleared by arrest under the system of uniform crime reporting. Thus, it will be seen that the arrest of one individual may clear several offenses while under different circumstances the arrest of several persons may clear only one crime. The foregoing covers generally most of the clearances reported by the police. There are, however, certain exceptional circumstances under which an offense is treated as cleared where the offender is not actually arrested and charged with the commission of the offense. For example, if an offender in a murder case commits suicide the criminal homicide he committed is considered exceptionally cleared through the suicide of the offender. The general requisites of an "exceptional clearance" are that the identity and whereabouts of the offender are known to the police but for reasons beyond their control it is not possible to make him available for prosecution in the local jurisdiction.

The recovery of stolen property does not in itself render an offense cleared; however, in connection with the comparatively small proportion of offenses against property cleared, it should be observed that in many of these cases the stolen property is recovered. This is particularly true with reference to the offense of auto theft. The reports received from the police for many years have reflected over 90 percent of the stolen automobiles as recovered. For information concerning property stolen and recovered during 1945 reference may be made to Volume XVI, Number 2 of the Uniform Crime Reports Bulletin.

It will be observed from the data in table 16 that for robbery and crimes against the person the number of persons charged frequently

exceeds the number of offenses cleared. This is attributable in a large part at least to the intensive investigative attention the more serious crimes frequently receive. Naturally, when a criminal homicide, rape, or robbery is reported to the police every effort is exerted to arrest all persons involved, including those charged with being accessories.

For manslaughter by negligence in cities with population in excess of 250,000 the figures appear unusual in that the number of persons charged actually exceeds the number of offenses reported. This situation which is consistently noted each year exists by reason of the fact that the police in a number of the larger cities follow the practice of arresting and charging with manslaughter all drivers of vehicles involved in fatal accidents pending the results of their investigation, and in a number of such instances this investigation reflects that no offense of negligent manslaughter occurred and the arrested offender is then released.

For the crimes of burglary, larceny, and auto theft it will be noted that the number of offenses cleared by arrest generally exceeds the number of persons charged. Generally, the tendency of a recidivist to repeat the same type of crime is found to be most pronounced on the part of persons committing crimes against property, and the police through careful investigation incident to the arrest of an offender are often successful in clearing a number of previously unsolved crimes.

The annual reports used in preparing the following tabulations were received from the police along with questionnaires concerning the nature of the entries on them. No reports were included unless the law-enforcement agency indicated the figures concerning offenses known to the police were based on a record of crimes and reported offenses and included all such incidents brought to the attention of the police. In addition the police departments represented in the tabulations indicated the figures on their annual reports concerning offenses cleared by arrest were properly distinguished from data showing the number of persons arrested.

Relation Between Offenses Known and Offenses Cleared

Calendar Year 1945

Offenses Against Property

1,422 CITIES

47,034,938 POPULATION

FIGURE 6.

Persons Charged (Held for Prosecution), 1945

The number of persons arrested and formally charged by the police in 1,422 cities, representing a combined population in excess of 47,000,000, is presented in table 17. A substantial number of the arrests were for serious crimes, as indicated by the following figures:

Criminal homicide.....	4, 280	Forgery and counterfeiting....	4, 408
Robbery.....	10, 218	Rape.....	3, 816
Aggravated assault.....	20, 617	Narcotic drug laws.....	1, 877
Burglary.....	36, 379	Weapons (carrying, possessing, etc.).....	13, 106
Larceny.....	74, 627	Driving while intoxicated.....	44, 832
Auto theft.....	23, 194		
Embezzlement and fraud.....	6, 480		
Stolen property (receiving, etc.).....	3, 931		

Generally, the larger cities reported more arrests per unit of population than the small communities, although there were a few marked exceptions. As an illustration, the number of arrests for assault per 100,000 inhabitants in cities with population from 50,000 to 100,000 exceeded the figure for cities over 250,000. Generally, the arrest rates for burglary, larceny, auto theft, forgery and counterfeiting, and liquor law violations were higher in some of the groups of small cities than in the large, heavily populated districts. For driving while intoxicated the smallest figure for arrests per unit of population (65.7) is for the group of cities with more than 250,000 inhabitants, and the highest (165.2) in the group of cities with population under 10,000.

In examining the data in table 17 it should be remembered that under the uniform crime reporting system the rules for scoring the number of persons charged differ from those for scoring the number of offenses known to the police. For example, if an automobile is stolen by two persons who are thereafter arrested, one offense of auto theft is listed as an offense known to the police; one offense of auto theft is treated as cleared by arrest and two persons are recorded as arrested and charged with auto theft. On the other hand, if one person commits two burglaries and is arrested, only one arrest for burglary is listed, although both burglary offenses would be scored as offenses known to the police and both would be treated as cleared by arrest.

1-11: The number of persons charged and the rate are based on the reports from the number of cities indicated below:

Footnote	Cities	Population
1	1,421	46,740,204
2	29	18,707,074
3	1,421	47,019,431
4	397	6,059,738
5	1,410	45,002,358
6	29	17,378,356
7	43	6,165,058
8	84	5,806,925
9	166	5,779,415
10	393	5,988,829
11	695	3,883,775

In the foregoing tabulation the arrests for violations of road and driving laws, parking violations, and other traffic and motor vehicle laws, except driving while intoxicated, are grouped under one classification. However, 1,282 of the cities reported detailed figures for each of the three traffic violation categories and their figures are summarized in table 18.

Offenses Known, Offenses Cleared by Arrest, and Persons Found Guilty, 1945

Of every 1,000 major crimes committed last year, 289 were cleared by the arrest of 193 persons of whom 145 were found guilty according to the reports of 162 cities with population in excess of 25,000. The proportion of persons found guilty in court in relation to each 1,000 offenses reported to the police ranged from 120 for larceny to 503 for murder. As indicated in tables 19 and 20 over 80 percent of the persons charged by the police were found guilty. The figures for individual offense classes are quite similar to those for 1944 although some changes were observed. For example, the proportion of persons found guilty who were arrested for gambling and robbery increased noticeably while decreases were noted in the percentage found guilty among those charged with manslaughter by negligence, forgery and counterfeiting, embezzlement and fraud, receiving stolen property, sex offenses, and liquor law violations. In 1945 the percentage of persons charged found guilty ranged from 40.0 percent for manslaughter to 89.0 for driving while intoxicated.

Since the annual returns do not provide for the listing of data relating to offenses known to the police for the part II crimes tabulations concerning persons found guilty for the part I and part II offense classes are presented separately in tables 19 and 20. In preparing the summaries only those reports were used wherein it appeared the entries for persons found guilty represented the final disposition of the charges placed against persons arrested, as distinguished from disposition at some preliminary judicial stage.

The offense classes in table 20 are not identical with those in table 17 because some of the reports used in preparing the compilations as to persons found guilty did not include separate figures for the offense classes consolidated in table 20.

PERSONS CHARGED AND PERCENT FOUND GUILTY CALENDAR YEAR 1945

TOTAL POPULATION 17,313,024

162 CITIES WITH OVER 25,000 INHABITANTS

162 CITIES WITH OVER 25,000 INHABITANTS

TOTAL POPULATION 17,313,024

FIGURE 8.

Persons Released (Not Held for Prosecution), 1945

The figures for persons released represent those taken into custody when it was thought they had been involved in the commission of some crime but who were later released by the police either because the investigation established their innocence or because the evidence available was not sufficient to warrant the filing of formal charges against them. Persons taken into custody and released with a reprimand or on the "golden rule" principle are likewise included, as are persons summoned, notified, or cited to appear in court or at the police department for alleged traffic violations who fail to appear and are not subsequently arrested. Included also are some instances in which youthful persons are released because under the circumstances it was felt the individual case would be handled more properly without prosecution.

The available data concerning persons released by the police are presented in tables 21 and 22. The figures showing the number of persons released and the rate per 100,000 inhabitants in table 21 are based on the annual reports of 823 cities representing a total population of 24,892,370. In table 21 all types of violations of traffic laws, with the exception of driving while intoxicated, are included opposite "traffic and motor vehicle laws"; however, 550 of these cities reported detailed information as to persons released by the police for (1) violations of road and driving laws, (2) parking violations, and (3) violations of other traffic and motor vehicle laws. Table 22 includes the number of persons released for these violations together with the rate per 100,000 inhabitants. Warning tags used in some cities for minor traffic violations are included.

The number of cities represented in tables 21 and 22 are considerably less than in table 17 since reports were excluded from the following two tables if there were no entries showing persons released or if the entries appeared incomplete or incorrect.

TABLE 21.—Persons released without being held for prosecution, 1945; number and rate per 100,000 inhabitants, by population groups

[Population figures from 1940 decennial census]

Offense charged	Total, 823 cities; total population 24,892,370	Group I	Group II	Group III	Group IV	Group V	Group VI
		19 cities over 250,000; population 9,441,173	17 cities, 100,000 to 250,000; population 2,418,850	49 cities, 50,000 to 100,000; population 3,418,767	100 cities, 25,000 to 50,000; population 3,445,372	256 cities, 10,000 to 25,000; population 3,980,617	382 cities under 10,000; population 2,187,591

Offenses Known, Offenses Cleared by Arrest, and Persons Charged by Geographic Divisions, 1945

The data concerning offenses cleared and persons charged in tables 16 and 17 are presented in tables 23 and 24 with the cities represented grouped by geographic division in order to make possible the comparisons of local figures with the average for other cities in the same section of the country. For a list of the States included in each of the nine geographic divisions reference may be made to table 4 of this issue of the bulletin.

Since marked variations are regularly seen in the number of offenses committed per 100,000 population in the different sections of the country, it normally follows that somewhat similar variations may be expected in the number of persons arrested in the several geographic divisions.

In examining the data presented in table 24 it should be remembered that the figures for prostitution and commercialized vice may be considered conservative, for in many jurisdictions persons taken into custody for such violations are frequently charged with other sex offenses (such as adultery, fornication, lewd and lascivious conduct), vagrancy, or disorderly conduct, and such arrests therefore are listed opposite those offense classes. Similarly persons arrested for intoxication may be charged with disorderly conduct; persons arrested for felonious assaults may be charged with a misdemeanor assault; and persons arrested for auto theft may be charged with the use of an automobile without the owner's consent.

The tabulations, in other words, may be influenced by the local policy as to what offense is charged. Theoretically, an offender should be charged with the offense committed, but in many instances the charge placed against the offender by the police is dependent upon the policy and practice of other officials, such as the prosecuting attorneys and judges. These local practices are, of course, materially affected by public opinion and established customs in the community.

TABLE 23.—Number of offenses known, number and percentage of offenses cleared by arrest, 1945, by geographic divisions

¹⁻⁸ Number of persons charged and the rate are based on the reports of the number of cities as follows:

Footnote	Cities	Population	Footnote	Cities	Population
1	71	2,893,057	5	365	13,204,217
2	349	9,656,663	6	105	3,809,949
3	136	5,005,185	7	71	3,010,129
4	349	9,656,663	8	143	3,614,976

DATA COMPILED FROM FINGERPRINT RECORDS

Source of Data

During the first 6 months of 1946, the F B I examined 309,302 arrest records, as evidenced by fingerprint cards, in order to obtain data concerning the age, sex, race, and previous criminal history of the persons represented. The compilation has been limited to instances of arrests for violations of state laws and municipal ordinances. In other words, fingerprint cards representing arrests for violations of Federal laws or representing commitments to any type of penal institution have been excluded from this tabulation.

The number of fingerprint records examined exceeded the 270,739 handled for the first 6 months of 1945 by 14.2 percent. The tabulation of data from fingerprint cards obviously does not include all persons arrested, since there are individuals taken into custody for whom no fingerprint cards are forwarded to Washington. Furthermore, data pertaining to persons arrested should not be treated as information regarding the number of offenses committed, since two or more persons may be involved in the joint commission of a single offense, and on the other hand one person may be arrested and charged with the commission of several separate crimes.

Offense Charged

More than 41 percent (126,927) of the records examined during the first 6 months of 1946 represented arrests for major violations. Persons charged with murder, robbery, assault, burglary, larceny, or auto theft numbered 90,367, constituting 29.2 percent of the total arrest records examined.

Sex

Fingerprint cards representing arrests of males during the first half of 1946 numbered 276,621, which is a 21.9 percent increase over the 226,885 cards received during the same period of 1945. Female arrest prints decreased from 43,854 during the first half of 1945 to 32,681 in the like period of 1946, representing a decrease of 25.5 percent.

Age

During the first half of 1946, males and females under 21 years of age arrested and fingerprinted numbered 54,564, constituting 17.6 percent of the total arrests. In addition, there were 53,841 (17.4 percent) between the ages of 21 and 24, making a total of 108,405 (35.0 percent) less than 25 years old. Arrests of persons 25 to 29 years old numbered 49,446 (16.0 percent). The resultant total is

TABLE 25.—Distribution of arrests by sex, January–June 1946

Offense charged	Number			Percent		
	Total	Male	Female	Total	Male	Female
Total	309,302	276,621	32,681	100.0	100.0	100.0

All other offenses	14,291	11,468	2,823	4.6	4.1	8.6

¹ Less than one-tenth of 1 percent.

157,851 (51.0 percent) less than 30 years of age. It should be remembered that the number of arrest records is doubtless incomplete in the lower age groups because of the practice of some jurisdictions not to fingerprint youthful offenders.

Youths played a predominant part in the commission of crimes against property as indicated by the following figures: During the first half of 1946 there were 73,887 persons of all ages arrested for robbery, burglary, larceny, auto theft, embezzlement, fraud, forgery, counterfeiting, receiving stolen property, and arson, and 24,872 (33.7 percent) of those persons were less than 21 years old.

The extent of the participation of youths in the commission of crimes against property is further indicated by the following figures: During the first half of 1946, 35.0 percent of all persons arrested were less than 25 years of age. However, persons less than 25 years old numbered 55.6 percent of those charged with robbery, 62.2 percent of those charged with burglary, 47.0 percent of those charged with larceny, and 76.8 percent of those charged with auto theft. More than one-half (53.4) of all crimes against property during the first half of 1946 were committed by persons under 25 years of age. Age 21 predominated among the male arrests and age 22 among the females.

TABLE 27.—Number and percentage of arrests of persons under 25 years of age, January–June 1946

Offense charged	Total number of persons arrested	Number under 18 years of age	Number under 21 years of age	Total number under 25 years of age	Percent-age under 18 years of age	Percent-age under 21 years of age	Total per-centage under 25 years of age

Criminal Repeaters

Of the 309,302 arrest records examined, 165,198 (53.4 percent) represented persons who already had fingerprint cards on file in the Identification Division of the F B I. For males the percentage having prior records was 55.6 and for females the percentage was 34.8. These figures pertain to fingerprint arrest records and in no way relate to the civil identification files of the F B I.

For males and females combined, the percentage with a prior fingerprint record was 14.6 at age 15, and 39.2 at age 20. For males, the percentage was 15.4 at age 15 and 41.1 at age 20, while for females, the percentage with prior fingerprint records was 7.9 at age 15 and 27.9 at age 20.

Arrests Outside of State of Birth

The 1940 decennial census indicates that 22.4 percent of the native population resided outside of their State of birth. A tabulation of similar information from the fingerprint records disclosed that 56.1 percent of all the persons arrested and fingerprinted during the first half of 1946 were arrested outside of their State of birth. The figures for males and females were generally quite similar, for males 56.4 percent and for females 53.4 percent.

Race

Most of the persons represented in this study were members of the white and Negro races. Including Mexicans, who numbered 10,987, members of the white race represented 232,428 of the 309,302 arrest records received, while 73,069 were Negroes, 2,811 were Indians, 241 Chinese, 68 Japanese, and 685 were representatives of other races.

OFFENSE CLASSIFICATIONS

In order to indicate more clearly the types of offenses included in part I and part II offenses, there follows a brief definition of each classification:

Part I Offenses

1. *Criminal homicide*.—(a) Murder and nonnegligent manslaughter includes all wilful felonious homicides as distinguished from deaths caused by negligence. Does not include attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides excluded from this classification are limited to the following types of cases: (1) The killing of a felon by a peace officer in line of duty; (2) The killing of a hold-up man by a private citizen. (b) Manslaughter by negligence includes any death which the police investigation establishes was primarily attributable to gross negligence on the part of some individual other than the victim.

2. *Rape*.—Includes forcible rape, statutory rape (no force used—victim under age of consent), assault to rape, and attempted rape.

3. *Robbery*.—Includes stealing or taking anything of value from the person by force or violence or by putting in fear, such as strong-arm robbery, stick-ups, robbery armed. Includes assault to rob and attempt to rob.

4. *Aggravated assault*.—Includes assault with intent to kill; assault by shooting, cutting, stabbing, maiming, poisoning, scalding, or by the use of acids. Does not include simple assault, assault and battery, fighting, etc.

5. *Burglary—breaking or entering*.—Includes burglary, housebreaking, safe-cracking, or any unlawful entry to commit a felony or a theft, even though no force was used to gain entrance. Includes attempts. Burglary followed by larceny is included in this classification and not counted again as larceny.

6. *Larceny—theft* (except auto theft).—(a) Fifty dollars and over in value; (b) under \$50 in value—includes in one of the above subclassifications, depending upon the value of the property stolen, thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Does not include embezzlement, "con" games, forgery, worthless checks, etc.

7. *Auto theft*.—Includes all cases where a motor vehicle is stolen or driven away and abandoned, including the so-called joy-riding thefts. Does not include taking for temporary use when actually returned by the taker, or unauthorized use by those having lawful access to the vehicle.

Part II Offenses

8. *Other assaults*.—Includes all assaults and attempted assaults which are not of an aggravated nature and which do not belong in class 4.

9. *Forgery and counterfeiting*.—Includes offenses dealing with the making, altering, uttering, or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.

10. *Embezzlement and fraud*.—Includes all offenses of fraudulent conversion, embezzlement, and obtaining money or property by false pretenses.

11. *Stolen property; buying, receiving, possessing*.—Includes buying, receiving, and possessing stolen property as well as attempts to commit any of those offenses.

12. *Weapons; carrying, possessing, etc.*—Includes all violations of regulations or statutes controlling the carrying, using, possessing, furnishing, and manufacturing of deadly weapons or silencers and all attempts to violate such statutes or regulations.

13. *Prostitution and commercialized vice.*—Includes sex offenses of a commercialized nature, or attempts to commit the same, such as prostitution, keeping bawdy house, procuring, transporting, or detaining women for immoral purposes.

14. *Sex offenses* (except rape and prostitution and commercialized vice).—Includes offenses against chastity, common decency, morals, and the like. Includes attempts.

15. *Offenses against the family and children.*—Includes offenses of nonsupport, neglect, desertion, or abuse of family and children.

16. *Narcotic drug laws.*—Includes offenses relating to narcotic drugs, such as unlawful possession, sale, or use. Excludes Federal offenses.

17. *Liquor laws.*—With the exception of “drunkenness” (class 18) and “driving while intoxicated” (class 22), liquor law violations, State or local, are placed in this class. Excludes Federal violations.

18. *Drunkenness.*—Includes all offenses of drunkenness or intoxication.

19. *Disorderly conduct.*—Includes all charges of committing a breach of the peace.

20. *Vagrancy.*—Includes such offenses as vagabondage, begging, loitering, etc.

21. *Gambling.*—Includes offenses of promoting, permitting, or engaging in gambling.

22. *Driving while intoxicated.*—Includes driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.

23. *Violation of road and driving laws.*—Includes violations of regulations with respect to the proper handling of a motor vehicle to prevent accidents.

24. *Parking violations.*—Includes violations of parking ordinances.

25. *Other violations of traffic and motor vehicle laws.*—Includes violations of State laws and municipal ordinances with regard to traffic and motor vehicles not otherwise provided for in classes 22–24.

26. *All other offenses.*—Includes all violations of State or local laws for which no provision has been made above in classes 1–25.

27. *Suspicion.*—This classification includes all persons arrested as suspicious characters, but not in connection with any specific offense, who are released without formal charges being placed against them.

Volume XVII

January 1947

Number 2

SUMMARY

Crime Trends, 1945-46

Crime in 1946 continued its upward trend increasing 7.4 percent over 1945 in the urban areas. In the individual offense classifications increases were as follows: Murder, 17.3 percent; robbery, 15.6 percent; aggravated assault, 11.4 percent; burglary, 11.3 percent; larceny, 8.6 percent; manslaughter by negligence, 6.4 percent; and rape, 4.5 percent. Auto thefts declined 4.9 percent.

Crime in the rural areas was up 14.1 percent in 1946 and in each crime category the rural upswing exceeded that in the cities. Murders and robberies in the rural areas showed increases of 28.3 percent and 26.3 percent, respectively. Other increases were: Rape, 17.8 percent; negligent manslaughter, 16.1 percent; burglary, 15.3 percent; aggravated assault, 13.4 percent; larceny, 13.1 percent; and auto theft, 10.3 percent.

Crime Rates, 1946

For the convenience of police administrators and others interested in the crime problem, the number of offenses per 100,000 inhabitants is presented in this bulletin for cities grouped according to size and by location. Crime rates for individual States are also shown. A tabulation is likewise presented showing crime rates for the rural areas.

Value of Property Stolen, 1946

According to supplementary crime reports received from the larger cities the average value of the loot taken in crimes against property during 1946 was as follows: Robbery, \$160; burglary, \$133; larceny, \$59; and auto theft, \$638. Ninety-four and seven-tenths percent of the stolen cars and 21.3 percent of other stolen property was recovered by the police.

Estimated Number of Major Crimes, 1946

The year 1946 brought the estimated total of serious crime in the country to a new high for the past decade, 1,685,203. During the average day 36 persons were slain, 33 were raped, and 185 others feloniously assaulted. During each 24 hours on the average 172

persons were robbed, 981 burglaries were reported to the police, 630 cars were stolen, in addition to 2,580 miscellaneous larcenies of various types being committed.

Monthly Variations in Crime

Following generally the seasonal crime pattern of prior years aggravated assaults and rapes occurred most frequently during the summer months, showing a tendency to decline in the colder weather, while murders were inclined to rise toward the end of the year. Robberies, burglaries, larcenies, and auto thefts showed the customary tendency to be least frequent during the summer months and most frequent during the winter. Negligent manslaughters, consisting mostly of traffic fatalities where gross negligence was present, were much more frequent during the winter months than during the warm season.

Persons Arrested, 1946

More persons were arrested during 1946 than during any year of the past decade, according to the 645,431 arrest records received at the F B I. Most of the arrests among the age groups were for age 21, predominating for the first time since 1938, ages 17-19 predominating in the interim. Arrests of boys under 21 increased only 1.6 percent during 1946 and the year's figure for this age group was 5.8 percent less than that for 1941. On the other hand, although arrests of girls under 21 declined 33.1 percent in 1946, the figure for the year still exceeded that for 1941 by 40 percent.

Of the 645,431 arrest records examined during the year 54.2 percent represented persons who already had fingerprint arrest records on file in Washington and 56.4 percent were arrested outside of their State of birth.

CLASSIFICATION OF OFFENSES

The term "offenses known to the police" is designed to include those crimes designated as part I classes of the uniform classification occurring within the police jurisdiction, whether they become known to the police through reports of police officers, of citizens, of prosecuting or court officials, or otherwise. They are confined to the following group of seven classes of grave offenses, shown by experience to be those most generally and completely reported to the police: Criminal homicide, including (a) murder, nonnegligent manslaughter, and (b) manslaughter by negligence; rape; robbery; aggravated assault; burglary—breaking or entering; larceny—theft; and auto theft. The figures contained herein include also the number of attempted crimes of the designated classes. In other words, an attempted burglary or robbery, for example, is reported in the bulletin in the same manner as if the crime

had been completed. Attempted murders, however, are reported as aggravated assaults.

"Offenses known to the police" include, therefore, all of the above offenses, including attempts, which are reported by the law-enforcement agencies of contributing communities and not merely arrests or cleared cases. Offenses committed by juveniles are included in the same manner as those known to have been committed by adults, regardless of the prosecutive action. Complaints which upon investigation are learned to be groundless are not included in the tabulations which follow.

In publishing the data sent in by chiefs of police in different cities, the F B I does not vouch for their accuracy. They are given out as current information which may throw some light on problems of crime and criminal-law enforcement.

In compiling the tables, returns which were apparently incomplete or otherwise defective were excluded.

In the last section of this bulletin may be found brief definitions of part I and II offense classifications.

EXTENT OF REPORTING AREA

In the table which follows there is shown the number of police departments from which one or more crime reports were received during the calendar year 1946. Information is presented for the cities divided according to size, and the population figures employed are from the 1940 decennial census.

Population group	Total number of cities or towns	Cities filing returns		Total population	Population represented in returns	
		Number	Percent		Number	Percent
Total	1, 078	1, 045	96. 9	62, 726, 936	62, 286, 585	99. 3
1. Cities over 250,000.....	37	37	100. 0	30, 195, 339	30, 195, 339	100. 0
2. Cities 100,000 to 250,000.....	55	55	100. 0	7, 792, 650	7, 792, 650	100. 0
3. Cities 50,000 to 100,000.....	107	107	100. 0	7, 343, 917	7, 343, 917	100. 0
4. Cities 25,000 to 50,000.....	213	213	100. 0	7, 417, 093	7, 417, 093	100. 0
5. Cities 10,000 to 25,000.....	666	633	95. 0	9, 977, 937	9, 537, 586	95. 6

NOTE.—The above table does not include 2,123 cities, villages, and rural townships aggregating a total population of 10,612,985. The cities and villages included in this figure are those of less than 10,000 population filing returns, whereas the rural townships are of varying population groups.

In addition to the 3,168 city and village police departments which forwarded crime reports during 1946, one or more reports were received during the year from 2,319 sheriffs and State police organizations and from 12 agencies in Territories and possessions of the United States, making a grand total of 5,499 agencies contributing crime reports to the F B I during 1946.

MONTHLY REPORTS

Offenses Known to the Police—Cities Divided According to Population

The criminal element of our population is more active or more concentrated in the large population centers. This general observation has been apparent during past years and is again evident from the figures for 1946. Cities with 100,000 or more inhabitants generally had higher rates for all types of crimes than their smaller neighbors except for aggravated assault and larceny.

Assaults with intent to kill occurred with greatest frequency in cities with 50,000 to 100,000 inhabitants while the larceny crime rate in cities with over 250,000 inhabitants was less than these offenses per unit of population in cities from 25,000 to 100,000. It is interesting to note that this pattern has been identical during the past five years (1942-46).

The group representing the smallest cities (2,500-10,000) had a higher crime rate for rapes than all cities except those over 100,000 in population. Otherwise, the crime rates for the smallest cities were lowest.

A combined population of 67,262,382 is represented by the 2,262 cities reporting the number of offenses known to the police as shown in table 28. The rate per 100,000 inhabitants for cities grouped by population is also presented. Police administrators and others may utilize these data to compare the crime experience in a local community with that indicated by the national averages and with that of all cities within a particular population group.

The following figures show the percentage distribution of the crimes reported for 1946:

Offense	Rate per 100,000	Percent	Offense	Rate per 100,000	Percent
Total	1,751.3	100.0	Assault.....	67.5	3.8
Larceny.....	968.2	55.3	Robbery.....	62.8	3.6
Burglary.....	399.6	22.8	Rape.....	12.1	.7
Auto theft.....	229.9	13.1	Murder.....	6.5	.4
			Manslaughter.....	4.7	.3

Crimes of violence constituted slightly less than 9 percent of the total but the significance of the figure is staggering when it is observed that 103,313 persons in these cities were slain, robbed, raped, or otherwise feloniously assaulted.

TABLE 28.—Offenses known to the police, 1946; number and rate per 100,000 inhabitants, by population groups

[Population figures from 1940 decennial census]

Population group	Criminal homicide		Rape	Robbery	Aggravated assault	Burglary—breaking or entering	Larceny— theft	Auto theft

Number of offenses known.....	286	173	648	1,790	2,801	17,156	43,188	10,113
Rate per 100,000.....	4.20	2.54	9.52	26.3	41.2	252.1	634.5	148.6

¹ The number of offenses and rates for burglary and larceny—theft are based on reports as follows: Groups I-VI, 2,260 cities, total population, 57,876,053; group I, 34 cities, total population, 20,507,837.

OFFENSES KNOWN TO THE POLICE

PERCENT CHANGE

1945 - 1946

FIGURE 9.

Annual Trends, Offenses Known to the Police in Urban Communities

Crime rose 7.4 percent in 1946 with murders and robberies heading the list showing jumps of 17.3 percent and 15.6 percent, respectively. Aggravated assaults increased 11.4 percent and burglaries, 11.3 percent with other increases as follows: Larceny, 8.6 percent; manslaughter by negligence, 6.4 percent; and rape, 4.5 percent. The only decrease was 4.9 percent for auto theft.

The total number of offenses increased in each of the nine geographic divisions and in all but five of the individual States. In each geographic division increases were reported for murder, robbery, aggravated assault, burglary, and larceny while negligent manslaughters showed increases in all but the New England and Pacific areas; rapes increased in all divisions except the South Atlantic, Mountain, and Pacific States, while auto thefts increased only in the Middle Atlantic, East South Central, and Mountain geographic divisions.

Though not the most pronounced, the most widespread increase was in burglary and larceny during 1946 with increases registered in 41 States for burglary and in 42 for larceny. Increases in robbery were reported in 39 States with 6 showing decreases and 3 reflecting no change from 1945. Aggravated assaults rose in 35 States, declined in 12, and showed no change in 1. Offenses of rape increased in 30 States and declined in 18. Murders showed increases in 34 States, decreases in 10, and no change in 4, while negligent manslaughters rose in 25 States, declined in 18, and remained unchanged in 5. Auto thefts, on the other hand, increased in only 23 States and showed decreases in 25.

Considering only the size of the city, the figures reflect an increase in crime in each population group. Excluding auto thefts, crimes in each category increased in cities of all sizes except that negligent manslaughters declined in the 50,000 to 250,000 population groups accompanied by declines for rapes and aggravated assaults in cities with population from 100,000 to 250,000. Auto thefts increased only in the cities under 10,000 in population.

A review of the crime record during the war years clearly indicates the significant effects our participation in the world conflict had on the homefront crime picture.

The theft of automobiles which was on the increase during 1940 and 1941 dropped noticeably in 1942, but thereafter despite gasoline rationing and the shortage of cars the number of such offenses rose sharply to a peak in 1945. In 1946 with automobiles back in production and gas rationing discontinued, auto thefts declined. It may be observed in connection with this peculiar combination of events that the majority of automobiles stolen are taken by persons of 20 years of age and under.

Murders and aggravated assaults, which were generally on the upswing from 1939 through 1942, fell off in 1943 and then showed increases during the next 3-year period. The rise in these offenses was particularly sharp in 1946.

Negligent manslaughters, consisting for the most part of traffic fatalities resulting from gross negligence, broke an upward trend in 1942 and continued downward in their frequency during 1943. Since then, however, these offenses have steadily increased. The number of crimes of rape, which since 1931 have generally been on the increase,¹ certainly showed no tendency to decline or level off during the war years. In fact the upward trend was accentuated if anything. Robberies, burglaries, and larcenies showed a general tendency to decline during the early years of the war but have increased noticeably during the last two years. Robberies, which declined steadily during 1940-44, showed particularly sharp increases in 1945 and 1946.

Crime trends covering the war years are graphically presented in figures 10 and 11, based on the monthly uniform crime reports received from 373 cities with more than 25,000 inhabitants, representing a combined population of 50,616,919.

Comprehensive urban crime trend data for 1945-46 with the cities divided by population groups are presented in table 29, and for individual States, geographic divisions, and regions in table 30. These figures are based on monthly uniform crime reports received during 1945 and 1946 from 2,010 cities representing a combined population of 65,746,225.

(Offenses Against the Person)

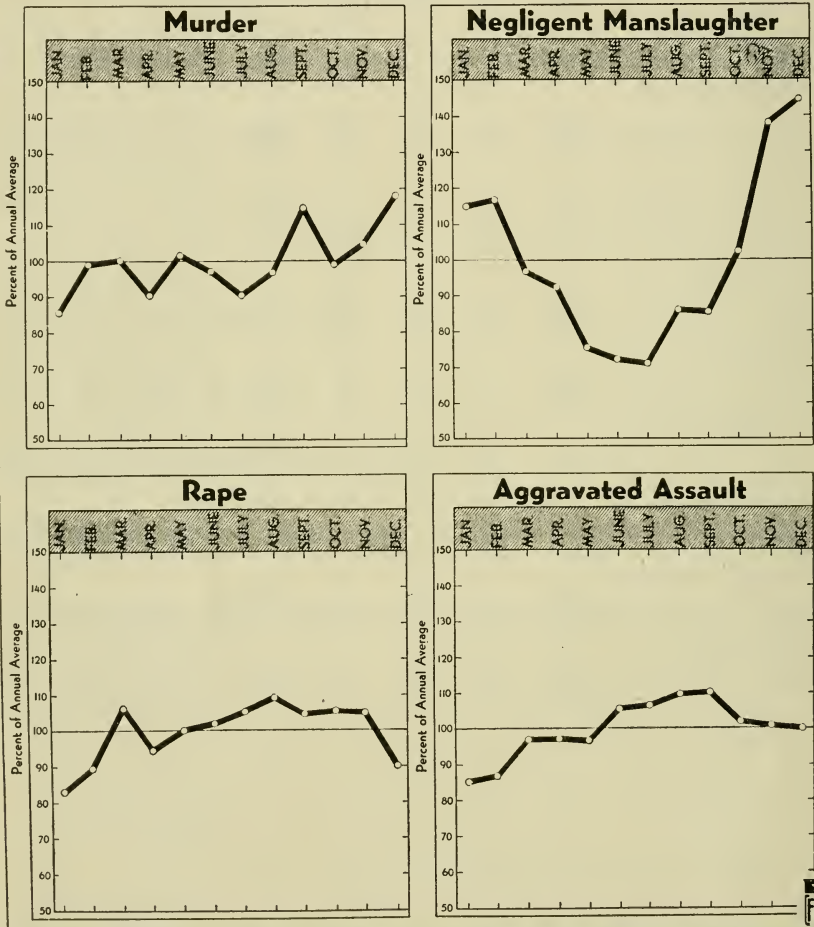

FIGURE 12.

Monthly Variations, Offenses Known to the Police

As a general rule the seasonal crime pattern in 1946 was much the same as in prior years, showing definite seasonal fluctuations.

Aggravated assaults and rapes were generally most frequent during the summer months and showed a general tendency to decline in the colder weather. The daily average in murders was 33 percent higher in September and 37 percent higher in December than in January. The daily average for rape was 31 percent higher for August than for January, while the aggravated assault figure was 29 percent higher in September, than in January.

Robberies, burglaries, larcenies, and auto thefts, on the other hand, showed a tendency to be least frequent in the summer and most frequent during the winter months. This was particularly noticeable for the crime of robbery which showed 41 percent and 64 percent higher daily averages in January and December respectively than in June. The burglary curve, though less pronounced, was generally as definite as the curve in robberies, the peak months being March and December. The burglary daily average in March was 24 percent in excess of the June daily average while the figure for December was 28 percent in excess of that for June.

Larceny, as in prior years, showed a tendency to increase during the early months of the year, fell off during the summer, then increased until October when the frequency in these crimes showed a tendency to diminish. The daily average for larceny in October was 20 percent in excess of the figure for January.

Auto theft offenses were most frequent during the early months of the year, falling to a low in July and from that point showed a tendency to increase in frequency. The figure for January was 39 percent over the daily average for July.

Offenses of manslaughter by negligence consist almost entirely of traffic fatalities resulting from gross criminal negligence on the part of some person other than the victim. As would be expected the seasonal curve for these crimes follows the pattern of traffic deaths which are generally most frequent during the winter months when driving conditions are less favorable. The daily average number of offenses of manslaughter by negligence in December was 104 percent in excess of that in July.

Offenses Known to the Police—Cities Divided According to Location

Crime per unit of population not only varies between cities of different population groups but fluctuates within city groups in different sections of the country. This variance is also observed among the States and larger geographic areas, reflecting the differences in the economic and social make-up of the various sectors of the country as well as other factors affecting crime. Tables 33 and 34 present the detailed figures for study.

The 1940 decennial census population figures were used in presenting these tabulations and while the data are indicative of the crime problem throughout the country any comparisons or singling out of different sections must be made cautiously and with provisos. The movement of population within the United States during the war years has resulted in tremendous increases in population in certain areas with corresponding decreases elsewhere.

In using figures locally, law enforcement officials in many instances may have available later population counts or estimates on which to base crime rates but for the purpose of this bulletin the 1940 population figures are used in lieu of later data for all cities.

TABLE 32.—Number of cities in each State included in the tabulation of uniform crime reports, 1946

¹ The rates for burglary and larceny are based on the reports of 2,260 cities with a total population of 57,876,053. ² The rates for burglary and larceny are based on the reports of 535 cities with a total population of 10,233,118. ³ The rates for burglary and larceny are based on the reports of 4 cities. ⁴ Includes the report for the District of Columbia.

Offenses in Individual Cities With More Than 25,000 Inhabitants

The number of offenses reported as having been committed during the period of January–December 1946 is shown in table 35. The compilation includes the reports received from police departments in cities with more than 25,000 inhabitants. Police administrators and other interested individuals will probably find it desirable to compare the crime rates of their cities with the average rates shown in tables 28, 33, and 34 of this publication. Similarly, they will doubtless desire to make comparisons with the figures for their communities for prior periods, in order to determine whether there has been an increase or a decrease in the amount of crime committed.

Caution should be exercised in comparing crime data for individual cities, because differences in the figures may be due to a variety of factors. The amount of crime committed in a community is not solely chargeable to the police but is rather a charge against the entire community. The following is a list of some of the factors which might affect the amount of crime in a community:

Population of the city and metropolitan area adjacent thereto.

The composition of the population with reference particularly to age, sex, and race.

The economic status and activities of the population.

Climate.

Educational, recreational, and religious facilities.

The number of police employees per unit of population.

The standards governing appointments to the police force.

The policies of the prosecuting officials and the courts.

The attitude of the public toward law-enforcement problems.

The degree of efficiency of the local law-enforcement agency.

It should be remembered that the war has brought about marked changes in some of the foregoing factors in many communities.

In comparing crime rates, it is generally more important to determine whether the figures for a given community show increases or decreases in the amount of crime committed than to ascertain whether the figures are above or below those of some other community.

TABLE 35.—Number of offenses known to the police, 1946, cities over 25,000 in population

[Based on 1940 decennial census]

¹ Larcenies not separately reported. Figure listed includes both major and minor larcenies.

² Figures include offenses committed by juveniles; this is in accord with the uniform reporting procedure followed by other cities.

Supplement to Return A Data

More than \$96,000,000 was taken by thieves during 1946 in 295 cities with over 25,000 inhabitants representing a combined population of 32,865,574 covered in an analysis of supplementary crime reports received by the F B I. The figures include 26,484 robberies at an average value of \$160 per holdup, 142,032 burglaries in which the average value of the loot was \$133, 84,252 automobile thefts at \$638 per car and 326,878 larcenies with an average of \$59 per crime. The police, on the other hand, recovered 94.7 percent of the stolen cars and 21.3 percent of other stolen property.

The heaviest robbery increases in 1946 were among those involving business establishments. These crimes rose 45.0 percent in the 295 cities represented in the following tabulations. As a result of a 15.2 percent increase in the total number of robberies and an 8.8 percent increase in the average value of property stolen per offense, the total loot taken in robberies rose 26.1 percent in 1946.

Increases were recorded in burglaries of all types as follows: Residence—night, 11.9 percent; residence—day, 6.2 percent; nonresidence—night, 10.0 percent; and nonresidence—day, 12.4 percent. These increases were accompanied by a 12.7 percent increase in the

value of property stolen in the average burglary with the result that the total value of property stolen in burglaries in 1946 showed a rise of 24.2 percent.

All types of larceny increased except pocket-picking and purse-snatching which represent only 4 percent of the total thefts. The largest increase among larcenies was for shoplifting which rose 33.5 percent in 1946. The total larcenies in the 295 cities represented in this study increased 8.4 percent and the average value of the property stolen rose 9.3 percent. This resulted in a 17.5 percent increase in the total value of the property taken in larceny cases.

The decrease in the number of automobile theft cases (5.8 percent) was nearly offset by the increase in the average value of the car taken (5.5 percent) with the result that the total value of automobiles stolen showed a decline in 1946 of only 0.7 percent.

January-December	1945	1946
Number of automobiles stolen.....	89,445	84,252
Number of automobiles recovered.....	84,985	79,748
Percent recovered.....	95.0	94.7

Forcible rapes which constituted 64.6 percent of the 4,143 rape cases reported by the 295 cities represented in this study increased 4.0 percent while statutory cases (no force used—victim under age of consent) increased 9.7 percent.

TABLE 36.—*Number of known offenses with divisions as to the nature of the criminal act, time and place of commission, and value of property stolen, 1945-46; 295 cities over 25,000 in population; total population, 32,865,574*

FIGURE 14.

Rural Crime Trends, 1945-46

Crime in the rural areas rose 14.1 percent during 1946 as compared with a 7.4 percent rise in the urban communities, and in each crime classification the rural upswing exceeded that in the cities. As in the cities, murders and robberies showed the greatest increase but the rural upswing (murder, 28.3 percent and robbery, 26.3 percent) was much greater than the rise in the urban areas (murder, 17.3 percent and robbery, 15.6 percent).

In one classification, auto theft, the urban communities reported a 4.9 percent decrease while a 10.3 percent increase was registered in the rural areas. Rapes in the rural areas were up 17.8 percent as compared with a 4.5 percent rise in the cities, and the increase in negligent manslaughters in the rural areas (16.1 percent) was much sharper than that in the urban communities (6.4 percent).

Larcenies in the rural areas during 1946 rose 13.1 percent as compared with an 8.6 percent rise in the cities. Rural burglaries and aggravated assaults increased 15.3 and 13.4 percent, respectively, as compared with urban increases in these crimes of 11.3 and 11.4 percent in that order.

There is presented in table 39 the number of offenses reported during 1945 and 1946 by 1,381 sheriffs, 105 rural village officers, and 12 State police organizations, representing a rural population of 32,661,822.

TABLE 39.—*Trends in offenses known, rural areas, 1945-46*

[Based on reports of 1,381 sheriffs, 105 rural village officers, and 12 State police organizations representing a combined population of 32,661,822. Population figures from 1940 decennial census]

Offense	Number of offenses		Percent change
	1945	1946	
Total.....	130,846	149,330	+14.1
Murder and nonnegligent manslaughter.....	1,657	2,126	+28.3

Larceny— <i>theft</i>	53,781	60,822	+13.1
Auto theft.....	19,844	21,882	+10.3

Rural Crime Rates, 1946

The number of offenses reported during 1946 by 1,487 sheriffs, 114 rural village officers and 12 State police organizations representing a combined population of 34,316,620, together with the rate per 100,000 inhabitants is presented in table 40 in order that the information might be available to the administrators of law enforcement agencies policing the rural areas and other interested individuals.

It will be seen that generally the rural rates for offenses against the person are comparable to the national averages for urban communities while the other offense classes are generally lower in the rural areas.

It should be observed, however, that some incompleteness probably exists in the rural reporting with reference to the less serious crimes. Some of the rural agencies whose reports are included in table 40 list very few crimes and it is likely that some of the reports are based on arrest records rather than on a record of offenses reported. The figures, therefore, should be considered conservative.

TABLE 40.—*Offenses known, rural areas, number and rate per 100,000 inhabitants, 1946*

[Based on reports of 1,487 sheriffs, 114 rural village officers, and 12 State police organizations representing a combined population of 34,316,620. Population figures from 1940 decennial census]

Offenses Known in Territories and Possessions of the United States

The available data concerning crimes committed in Territories and possessions of the United States are presented in table 41. Included are the figures for the First Judicial District of Alaska; Honolulu City and the counties of Honolulu, Hawaii, Kauai, and Maui in the Territory of Hawaii; the Isthmus of Panama, C. Z.; and Puerto Rico. The tabulation is based on offenses reported by law enforcement officials policing both the urban and rural areas except that the data for Honolulu City has been segregated from the figures for Honolulu County.

Estimated Number of Major Crimes in the United States, 1945-46

By the end of 1946 serious crime in the United States soared to an estimated 1,685,203, the largest total recorded in the past decade. During the average day, 36 persons were slain, 33 were raped, and 185 others feloniously assaulted.

Although a comparatively small percentage of the total offenses were classed as violent crimes against persons it is observed that every 5.7 minutes in 1946 there was a criminal homicide, rape, or assault with intent to kill.

Each average day left 172 persons robbed, 981 burglaries on the police records, 630 cars stolen, in addition to 2,580 miscellaneous larcenies of various types. The estimates are based on monthly reports received from over 2,200 cities representing a combined population in excess of 67,000,000. Although the larceny classification includes thefts of property of small value the estimated total of major crimes does not include many miscellaneous serious offenses, such as embezzlement, fraud, arson, receiving stolen property, carrying concealed weapons, and the like. It is, therefore, believed that the estimated totals as presented in table 42 are conservative.

DATA COMPILED FROM FINGERPRINT RECORDS

Source of Data

During 1946 the F B I examined 645,431 arrest records, as evidenced by fingerprint cards, in order to obtain data concerning the age, sex, race, and previous criminal history of the persons represented. The compilation has been limited to instances of arrests for violations of State laws and municipal ordinances. In other words, fingerprint cards representing arrests for violations of Federal laws or representing commitments to any type of penal institutions have been excluded from this tabulation.

The number of fingerprint records examined exceeded the 543,852 prints handled during 1945 by 18.7 percent. In fact, the arrest records examined last year exceeded the number received during any year of the past decade. The arrest records received during the past 10-year period numbered as follows:

Year	Number of arrests	Year	Number of arrests
1937.....	520, 153	1942.....	585, 988
1938.....	554, 376	1943.....	490, 764
1939.....	576, 920	1944.....	488, 979
1940.....	609, 013	1945.....	543, 852
1941.....	630, 568	1946.....	645, 431

The figures for the separate sexes and selected age groups are presented in tables 46 and 47.

The tabulation of data from fingerprint cards obviously does not include all persons arrested, since there are individuals taken into custody for whom no fingerprint cards are forwarded to Washington. Furthermore, data pertaining to persons arrested should not be treated as information regarding the number of offenses committed, since two or more persons may be involved in the joint commission of a single offense, and on the other hand one person may be arrested and charged with the commission of several separate crimes.

Offense Charged

More than 41 percent (266,137) of the records examined during 1946 represented arrests for major violations. Persons charged with murder, robbery, assault, burglary, larceny, and auto theft numbered 188,916, constituting 29.3 percent of the total arrest records examined.

Sex

Of the 645,431 arrest records examined, 10.7 percent represented the arrests of women. Female arrest prints decreased 18.3 percent, from 84,144 during 1945 to 68,742 in 1946.

Fingerprint cards representing arrests of males numbered 576,689, a 25.4 percent increase over the 459,708 records received during 1945.

TABLE 43.—*Distribution of arrests by sex, 1946*

¹ Less than $\frac{1}{10}$ of 1 percent.

Age

During 1946, and for the first time since 1938, age 21 predominated in the frequency of arrests. Age 19 was first during the years 1939–41 and during the years 1942–43 age 18 stood out in first place. During the last two war years, 1944–45, more persons aged 17 were arrested than any other age group. For males and females combined, the figures for the groups in which the largest number of arrests occurred during 1946 are as follows:

Age	Number of arrests
21	30,159
22	29,035
23	27,585
24	25,436
20	24,539

The frequency of male arrests followed the same pattern as above in the frequency of arrests. Arrests for females showed the largest number occurring at age 22 followed by ages 21, 23, 19, and 24 in that order.

During the past 10 years for males and females combined the age groups predominated in the order indicated in the following tabulation:

1937	1938	1939	1940	1941	1942	1943	1944	1945	1946
22	21	19	19	19	18	18	17	17	21
21	22	18	21	18	19	17	18	18	22
23	23	22	22	21	21	19	19	21	23
19	18	21	18	20	20	22	21	22	24
18	19	23	23	23	22	20	22	19	20

As a group, males under 21 arrested in 1946 showed little change from 1945 (+1.6 percent) while females in this age group declined 33.1 percent, but even so the number of girls under 21 arrested in 1946 (13,542) exceeded the 1941 figure by 40 percent, while males under 21 (95,245) fell short of the 1941 total by 5.8 percent. In this connection it may be remembered that the rise in juvenile crime among girls during the early war years was much more pronounced than the increase in the arrests of males under 21, and despite a 10.6 percent decrease in arrests of females under 21 during 1945 and the marked decline in 1946, the frequency of arrests for females in this lower age group was still at an unusually high level as compared with the last peacetime year.

During 1946, males and females under 21 years of age arrested and fingerprinted numbered 108,787, constituting 16.9 percent of the total arrests. In addition, there were 112,215 (17.3 percent) between the ages of 21 and 24, making a total of 221,002 (34.2 percent) less than 25 years old. Arrests of persons 25 to 29 years old numbered 103,725 (16.1 percent). The resultant total is 324,727 (50.3 percent) less than 30 years of age. It should be remembered that the number of arrest records is doubtless incomplete in the lower age groups because of the practice of some jurisdictions not to fingerprint youthful offenders.

Youths played a predominant part in the commission of crimes against property as indicated by the following figures: During 1946 there were 154,234 persons of all ages arrested for robbery, burglary, larceny, auto theft, embezzlement, fraud, forgery, counterfeiting, receiving stolen property, and arson; and 48,586 (31.5 percent) of those persons were less than 21 years old.

The extent of the participation of youths in the commission of crimes against property is further indicated by the following figures: During 1946 34.2 percent of all persons arrested were less than 25 years of age. However, persons less than 25 years old numbered 54.5 percent of those charged with robbery, 60.4 percent of those charged with burglary, 46.0 percent of those charged with larceny, and 74.6 percent of those charged with auto theft. More than one-half (51.5 percent) of all crimes against property during 1946 were committed by persons under 25 years of age.

Number of Males Arrested - Ages 16 to 24

¹ Total figures include arrests age unknown.

Criminal Repeaters

Of all the 645,431 arrest records examined, 350,066 (54.2 percent) represented persons who already had fingerprint cards on file in the Identification Division of the FBI. For males the percentage having prior records was 56.1 and for females the percentage was 39.0. These figures pertain to fingerprint arrest records and in no way relate to the Civil Identification Files of the FBI.

Arrests Outside of State of Birth

The 1940 decennial census indicates that 22.4 percent of the native population resided outside of their State of birth. Tabulation of similar information from the fingerprint records disclosed that 56.4 percent of all the persons arrested and fingerprinted during 1946 were arrested outside of their State of birth. The figures for males and females were generally quite similar, for males 56.6 percent and for females 54.4 percent.

Race

Most of the persons represented in this study were members of the white and Negro races. Including Mexicans, who numbered 19,793, members of the white race represented 478,211 of the 645,431 arrest records received, while 159,172 were Negroes, 5,700 were Indians, 432 Chinese, 140 Japanese and 1,776 were representatives of other races.

TABLE 48.—Percentage of persons arrested with previous fingerprint records, 1946

[Data compiled from fingerprint records]

Offense	Percent	Offense	Percent
Narcotic drug laws	77.6	Disorderly conduct	48.6
Forgery and counterfeiting	65.7	All other offenses	47.9

OFFENSE CLASSIFICATIONS

In order to indicate more clearly the types of offenses included in part I and part II offenses, there follows a brief definition of each classification:

Part I Offenses

1. *Criminal homicide*.—(a) Murder and nonnegligent manslaughter includes all wilful felonious homicides as distinguished from deaths caused by negligence. Does not include attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides excluded from this classification are limited to the following types of cases: (1) The killing of a felon by a peace officer in line of duty; (2) The killing of a hold-up man by a private citizen. (b) Manslaughter by negligence includes any death which the police investigation establishes was primarily attributable to gross negligence on the part of some individual other than the victim.

2. *Rape*.—Includes forcible rape, statutory rape (no force used—victim under age of consent), assault to rape, and attempted rape.

3. *Robbery*.—Includes stealing or taking anything of value from the person by force or violence or by putting in fear, such as strong-arm robbery, stick-ups, robbery armed. Includes assault to rob and attempt to rob.

4. *Aggravated assault*.—Includes assault with intent to kill; assault by shooting, cutting, stabbing, maiming, poisoning, scalding, or by the use of acids. Does not include simple assault, assault and battery, fighting, etc.

5. *Burglary—breaking or entering*.—Includes burglary, housebreaking, safe-cracking, or any unlawful entry to commit a felony or a theft, even though no force was used to gain entrance. Includes attempts. Burglary followed by larceny is included in this classification and not counted again as larceny.

6. *Larceny—theft* (except auto theft).—(a) Fifty dollars and over in value; (b) under \$50 in value—includes in one of the above subclassifications, depending upon the value of the property stolen, thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Does not include embezzlement, "con" games, forgery, worthless checks, etc.

7. *Auto theft*.—Includes all cases where a motor vehicle is stolen or driven away and abandoned, including the so-called joy-riding thefts. Does not include taking for temporary use when actually returned by the taker, or unauthorized use by those having lawful access to the vehicle.

Part II Offenses

8. *Other assaults*.—Includes all assaults and attempted assaults which are not of an aggravated nature and which do not belong in class 4.

9. *Forgery and counterfeiting*.—Includes offenses dealing with the making, altering, uttering, or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.

10. *Embezzlement and fraud*.—Includes all offenses of fraudulent conversion, embezzlement, and obtaining money or property by false pretenses.

11. *Stolen property; buying, receiving, possessing*.—Includes buying, receiving, and possessing stolen property as well as attempts to commit any of those offenses.

12. *Weapons; carrying, possessing, etc.*—Includes all violations of regulations or statutes controlling the carrying, using, possessing, furnishing, and manufac-

turing of deadly weapons or silencers and all attempts to violate such statutes or regulations.

13. *Prostitution and commercialized vice.*—Includes sex offenses of a commercialized nature, or attempts to commit the same, such as prostitution, keeping bawdy house, procuring, transporting, or detaining women for immoral purposes.

14. *Sex offenses* (except rape and prostitution and commercialized vice).—Includes offenses against chastity, common decency, morals, and the like. Includes attempts.

15. *Offenses against the family and children.*—Includes offenses of nonsupport, neglect, desertion, or abuse of family and children.

16. *Narcotic drug laws.*—Includes offenses relating to narcotic drugs, such as unlawful possession, sale, or use. Excludes Federal offenses.

17. *Liquor laws.*—With the exception of "drunkenness" (class 18) and "driving while intoxicated" (class 22), liquor law violations, State or local, are placed in this class. Excludes Federal violations.

18. *Drunkenness.*—Includes all offenses of drunkenness or intoxication.

19. *Disorderly conduct.*—Includes all charges of committing a breach of the peace.

20. *Vagrancy.*—Includes such offenses as vagabondage, begging, loitering, etc.

21. *Gambling.*—Includes offenses of promoting, permitting, or engaging in gambling.

22. *Driving while intoxicated.*—Includes driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.

23. *Violation of road and driving laws.*—Includes violations of regulations with respect to the proper handling of a motor vehicle to prevent accidents.

24. *Parking violations.*—Includes violations of parking ordinances.

25. *Other violations of traffic and motor vehicle laws.*—Includes violations of State laws and municipal ordinances with regard to traffic and motor vehicles not otherwise provided for in classes 22-24.

26. *All other offenses.*—Includes all violations of State or local laws for which no provision has been made above in classes 1-25.

27. *Suspicion.*—This classification includes all persons arrested as suspicious characters, but not in connection with any specific offense, who are released without formal charges being placed against them.
